You can configure MCE Controller to recognize on any host that can support TCP communication. You can configure the port and host from which MCE Controller will send requests to the target host. This host can be any MCE device. For example, when MCE Controller is configured to send requests from the MCE Hub to the IR emitter, it is setting up the Hub as the host and the Hub IR emitter port as the target port. You can also configure the port and host from which MCE Controller will receive responses. It can be another MCE device, a physical IR device, or a modem.

**What's New in this Release: Version 5.0.0** contains a number of changes and improvements. **Important Changes:** New MCE Controller Integration features include:

- \*Firmware Updates: MCE Controller has been rewritten in C# and now includes a SQL database. This allows MCE Controller to be updated automatically whenever a Firmware version has been released.
- \*Networking: MCE Controller now has built in networking allowing you to add remote control functionality to MCE Controller. This can be used to control the media device using a variety of remote control systems including Microsoft's Media Center remote control, as well as devices that support Windows Media Center remote control such as X10 and Crestron DMX512. You can easily set up your Windows Media Center remote control to control MCE Controller.
- \*Application Environment: MCE Controller can now be installed and run in multiple application environments including:
  - ASP.NET MVC Framework: MCE Controller can run inside of a .NET MVC application, allowing you to write your own rich UI with ASP.NET MVC. This enables you to utilize and write your own graphics and code in a way that's not possible when using the default Media Center control.
  - Microsoft Windows Application: MCE Controller can run inside of a Windows Application allowing you to utilize the same Graphics and Code as if it were a Windows Form. This allows you to write your own rich UI in a way that's not possible when using the default Media Center control.
  - VB6, VB.NET, and C# Windows Forms Applications: The Media Center control is written in C++ and is a Windows Forms application. MCE Controller, however, is written in C# and is a Windows Application. MCE Controller is therefore a much more capable application when dealing with Graphics and Code.
- \*GUI Improvements: \*Added WMI Explorer

The KEYMACRO is a hardware token that comes with the MCE Remote Control. It is a device that allows you to simulate any button on the remote by sending the appropriate KeyMacro command to a TCP/IP port on the MCE machine. KeyMacro (KMACRO) KEYMACRO functionality can be enabled by MCE Controller. MCE Controller can run in two modes, MCE Controller as a Client and MCE Controller as a Server. KMACRO settings for the Client mode are controlled in the Properties dialog. Sender settings for the Server mode are controlled in the Properties dialog. KMACRO on the remote is only enabled if MCE Controller is set as a Client. The remote button simulation process is initiated by sending the name of the button you wish to simulate. KMACRO on the remote is only enabled if MCE Controller is set as a Server. KMACRO Command string The string that is sent to the KMACRO device on the remote to simulate the button press. The following command strings are supported for the KMACRO button device

Call Media Centre: Tell Media Centre to go to the My Pictures page. Exit Media Centre: Tell Media Centre to exit. Exit from MKV Playback: Tell Media Centre to exit the MKV playback and to exit the MKV playback. Presentation Mode: Tell Media Centre to present the player to the user. Switch to the other page: Tell Media Centre to go to the other page. Control Volume: Tell Media Centre to increase the volume by X dB. Control Volume: Tell Media Centre to decrease the volume by X dB. Control Slider Position: Tell Media Centre to move the slider to the position indicated. Control Slider Position: Tell Media Centre to move the slider to the position indicated. Control Slider Position: Tell Media Centre to move the slider to the position indicated. Control Slider Position: Tell Media Centre to move the slider to the position indicated. Turn On Computer: Tell Media Centre to turn on the computer indicated. Turn Off Computer: Tell Media Centre to turn off the computer indicated. Sign out: Tell Media Centre to sign out. Start the Computer: Tell Media Centre to start the computer indicated. Stop the Computer: Tell Media 1d6a3396d6

- No GUI - Non-GUI - TCP Client - TCP Server - MS Office 2003 The MCE Controller was built using C#, .Net 3.5, Visual Studio 2008, and Microsoft SQL Server 2005. Please let me know if you want to see more screenshots of the MCE Controller. Download MCE Controller 2.0 What is new in official MCE Controller 2.0 software version? - Major update, New buttons added, Installed shortcuts on main window (Incl. CMD + D (instead of CTRL + D)) and icons on main window, Special pricing for large companies (bout \$100 for 100 licenses) MCE Controller Software is a software program that helps you control your whole home automation system via remote. You can control almost every function of your whole home automation system, such as lighting, blinds, curtains, TV, music system, security system, sound system, etc, using this software. MCE Controller software supports most kind of protocols, like CEC and RS232, and you can run it on PC, Laptop, MAC and Tablet. It also works on most popular OS, such as Microsoft Windows, Mac OS and Android. MCE Controller is a network communication software program. It connects your MCE Controller with your MCE infrared remote control. It supports all kind of protocols, such as IR, CEC, RS232 and more. It is easy to install, setup, config, use and maintain. It also works well with different kinds of remote controllers, such as Sony MCE-100, LG Electronics, Philips MCE-TV2, etc. If you have not installed the MCE Controller software on your computer, now you can download MCE Controller software for free. If you are a license holder, you can update your MCE Controller software for free. Allfilessoft Network Technologies, Inc. software programs are copyrighted, and all rights are reserved. All files are delivered "as is". Allfilessoft Network Technologies, Inc. disclaims all warranties, expressed or implied, including but not limited to warranties of merchantability, fitness for use and noninfringement. We do not warrant that use of the MCE Controller will be uninterrupted or error-free. MCE Controller is freeware for home and educational use./\*-----\*/ /\*

#### What's New in the MCE Controller?

MCE Controller is an interactive program that allows you to control your Media Center system from a computer using your MCE IR remote. MCE Controller Features: MCE Controller has the following features: • Send text commands to MCE media centers over a TCP/IP connection • Each command is sent to a different MCE device (music, pictures, tv, etc.) • Ability to send "press" or "unpress" commands (such as "mypictures" for the Pictures page) • Ability to send multiple text commands in one command (such as "mymusic mypictures") • Multicast capabilities • Command log for all command activity • Configurable TCP/IP host and port • Configurable TCP/IP host and port MCE Controller License Requirements: MCE Controller is a freeware utility. There is no royalty. MCE Controller Screenshots: Installation of MCE Controller: After installing MCE Controller from the setup disk you must extract the MCE Controller file (mcecontroller.exe) to the Program Files folder. For more detailed instructions, please see the INSTALL.txt file in the mcecontroller directory. After running MCE Controller, the program will start automatically when Media Center is started and a MCE IR remote is connected to the MCE Controller. When running MCE Controller for the first time you will be prompted for a TCP/IP host name and port number. MCE Controller is able to be configured for many different TCP/IP ports, however, the default TCP/IP port number is 2005. After entering a TCP/IP host name and port number, MCE Controller will print the MCE IR code for pressing the navigation button on the remote. Pressing the same button on the remote will activate the corresponding MCE Control Interface page. If the remote does not have a navigation button, the instructions for configuring the remote are included. MCE Controller Screenshots: Running MCE Controller: MCE Controller has only one window. After opening the MCE Controller application, the status window will appear. MCE Controller Status Window: The status window will show a log of all MCE Controller activity. Changing the TCP/IP Port: The TCP/IP host name and port number can be set in MCE Controller. You must have already entered a TCP/IP host name and port number when running MCE Controller. The TCP/IP host name and port number will only be changed when MCE Controller is closed and re-opened. MCE Controller: If MCE Controller is started, it will open the status window that shows a

**System Requirements For MCE Controller:**

**MINIMUM:** OS: Windows XP Processor: Intel Pentium 4 3.0 GHz Memory: 1 GB RAM Graphics: 128 MB ATI Radeon X1300 **RECOMMENDED:** Processor: Intel Core 2 Duo E6300 2.6 GHz Memory: 2 GB RAM Graphics: 256 MB ATI Radeon X1200 **PLAYSTATION 2 (PS2)** Game Name: The Legend of Mana Developer: Square Enix Publisher:
