
Internet Traffic Agent Crack+ For PC

The 3D Style Filter Manager is an advanced and customizable tool for you to check and adjust your current filter settings. It features strong customization and updating functions, plus an intuitive and convenient user interface. Main Features: • Customize the default style and save it as the default style. • Adjust filter settings such as font, font size, border size, filter background color and others according to your personal preferences. • Add or remove styles you want, or adjust the current styles. • Add and remove filters in the style settings or the default settings. • Preview the images and adjust filter settings such as font, font size, border size, filter background color and others. • Adjust style settings such as font, font size, border size, filter background color and others. • Adjust filter properties according to your needs, such as addition or removal of filters, the order of the filters, or the order of the style names. • Add filters to your current filters and then filter by the style name. • Filter out undesirable results from the current filter. • Generate a PDF, XLS, CSV or HTML report from the saved filter list. • Highlight a particular style in the filter list to make the selected style stand out. • Apply to selected filters only. • Apply to selected pages only. • Apply to selected styles only. • Apply to all pages. • Choose whether to store captured IP addresses in the database. • Choose whether to store captured data in the database. • Set up and save the location where IP addresses will be stored. • Download captured data and save it to the specified location. • Choose whether to display time for the color highlights. • Choose whether to display time for the filter list. • Adjust the background color for the filter list. • Change the filter list title color. • Choose how to show the filter list. • Change the font size for the filter list. • Choose how to show the filter list. • Change the color for the filter list. • Choose the filter list border size. • Change the color of the filter list border. • Choose the list item border size. • Change the font color for the list item. • Choose the list item font size. • Change the background color for the list item. • Choose the color of the filter list background. • Specify the color for the filter list background.

What's New in the Internet Traffic Agent?

Internet Traffic Agent is an advanced and approachable software utility made for monitoring network traffic based on user-defined filters. It lets you generate reports and customize a wide range of settings. Although it sounds complicated to work with, the app doesn't require heavy experience with networking tools. Setup and interface The installation procedure is fast. However, it needs to set up the WinPcap driver in order to work properly (unless it already exists on the computer). Internet Traffic Agent is packed in a comfortable and well-structured interface which shows a list with filter names and addresses, along with sent, received and total packets. You can edit the properties of existing filters or remove them from the list. Create filters and compile network traffic reports New filters can be put together by filling out some simple information, such as filter name, whether to store the captured hosts in the database or not, host type (local PC, custom IP or MAC address), in addition to IP and port filters to include or exclude. Internet Traffic Agent lets you clear IPs or history for any selected filters, suspend the monitor for either one, reset all filters, copy information to the Clipboard for closer examination, hide the window with captured IPs and history, as well as generate traffic reports from any preferred filters, sort the captured IP addresses or history table according to various criteria (e.g. country, last update), and save them to CSV or HTML files. Configure program settings easily The app can be asked to run at every Windows startup until further notice and to minimize to the system tray area to become non-intrusive. It can automatically check for software updates when it launches. What's more, you can select a different CSV separator when saving reports, change the measurement unit for showing sent and received traffic, view the network adapters available, modify the default frequency for database autosaving and storage time for keeping database records, as well as customize the interface when it comes to the grid lines and color highlights. Evaluation and conclusion It worked smoothly throughout our evaluation, without causing the operating system to freeze, crash or prompt error dialogs. CPU and RAM consumption was low. Taking into account its intuitive and advanced options, Internet Traffic Agent proves to be a reliable assistant for monitoring network traffic and generating reports. Free to try. Buy a subscription and gain full access to all of our software, mobile apps and e-commerce websites for as long as your subscription lasts. You may cancel anytime. Learn more or contact us.
