Besides the usual drafting features, AutoCAD also supports a wide range of technical functions, such as engineering calculation, drawing-oriented surveying, drafting, and presentations. The AutoCAD software product line consists of three parts: AutoCAD Architecture, AutoCAD LT Architecture, and AutoCAD LT Express Architecture, ranging from entry-level to top-of-the-line. Once released, AutoCAD was a runaway success, selling over two million licenses by 1990, and millions more since then. While most of AutoCAD's sales are for desktop versions, over 50 million licenses have been sold for mobile versions. The success of AutoCAD inspired many new software products, including AutoCAD LT, AutoCAD Architecture, and AutoCAD 360. Since 1999, it has become very fashionable for governments and schools to issue large volume purchases of AutoCAD, which allows them to issue licenses to users at a very low price. In 2016, Cisco Systems reported that the number of AutoCAD installations grew by 10% from 2015 to 2016. History AutoCAD was developed by Autodesk (formerly Autodesk), which was founded in 1972 by architect Gary Kildall, who was later responsible for the widely used CP/M operating system. Autodesk was an integral part of the Computer Associates/MDA business division of Atari, Inc. In August 1982, Computer Associates acquired Autodesk from Atari, and released AutoCAD on the Apple II, Atari ST, IBM PC, and TRS-80 home computer in 1982, where it quickly became one of the best-selling home/office productivity suites. By 1984, 3 million licenses of AutoCAD had been sold for the Apple II and PC platforms. In 1984, Computer Associates sold Autodesk to Navex International, Inc. in the Atari acquisition group, where it became a separate division called N-Tec. In February 1986, Navex and Chicago-based Field Enterprises, which owned Trimble Navigation, formed a joint venture known as N-Trace International. In the fall of 1987, N-Trace formed a new company, Autodesk Inc. In February 1990, Autodesk sold the AutoCAD software product line to Alion Science and Technology Corporation of Chicago for US\$62.5 million. That same year, Autodesk established the AutoCAD Technical Center in India to support technical development and support. In October 1991, Alion was

Military AutoCAD LT was adopted by the United States Army in 1996, and used until 2010 for drawings of military bases. While AutoCAD had been available to the military since 1984, it was not until the "DoD 3270" standard was finalized in 1988, that it became a viable choice for a graphical modeling solution for the military. Prior to Autodesk acquiring the technology, the Military released an R&D project to develop a military specific version of AutoCAD, dubbed "AutoCAD MIL", which was later renamed to "AutoCAD BX". Following Autodesk acquiring the technology, they developed the commercial product AutoCAD LT. It has been used by the United States Navy and the United States Air Force in the documentation and construction of military bases and installations. Apparatus for forming a continuous web of fibrous material, especially a web of paper, are well known. One type of such apparatus utilizes a revolving casting drum for forming the web. The drum is supported for rotation by bearings on the floor of a vessel, and the web is formed by a throw of a felt-like sheet of paper on the outside of the rotating drum, such throw being conveyed thereon by means of a multitude of felts mounted to the periphery of the drum.
