

Dnastar 10 Lasergene

DNASTAR Lasergene is the comprehensive software solution needed to design primers, perform multiple sequence alignments, assemble and analyze NGS ... It is also suitable for planning and analyzing data from various sources and analyzing their biological and clinical relevance. Specialized tools are required for genetic sequence design and analysis. This is because many of these sequences contain several different primer binding sites and are affected by factors that are not normally tracked in the tools used to visualize genetic sequences.
