I don't want to take everything with me, because I'll forget or lose the notes, and I want to be able to share the notes with others who are taking the class.I don't know how to organize the information. I thought about taking a USB drive and just using the flash drive to work on the notes, but I'm worried that the note-taking process will bog down the computer (I have a MacBook Pro, running Leopard 10.5.4). Maybe I should just copy the notes from the drive and take them to class?What are some good systems people use to do this? ===== ian Use the notes section of your browser. Take a bookmark with the notes. They get copied into your notes and your notes are uploaded back to the server. ----- johngossman Buy a 3 ring binder. How did I get into such a situation? Lately I've been having a lot of issues getting up in the morning, sleeping in and then being tired all day. (I know, there are some people who do not believe in tired. I'm one of them, but I like to be in bed by 9 pm so I could still get up the next day. I want to feel rested, no matter what, and I've never been like that.) But I guess the morning is hard for me lately because I got all excited for the holidays. I was looking forward to shopping and decorating like it was nothing. The only problem was, I was not interested in either. So I feel like I have not accomplished anything. No shopping done, no decorating done, and no presents received. Yes, I could've given out a dozen gifts and not gotten a single gift back, but I could've also given them all out and not gotten any gifts back. I don't think that was the right thing to do either. So the solution is to not give gifts at all. It's not that I don't love to give gifts, it's just that I want to give the kind of gifts that I like to get. I want to give and get at the same time. I'm not really sure when the first time was that I realized that. But whatever it was, I'm not going to try to find that out. I'm going to stay in bed until I have

Add comments to your drawing that can be printed together with the original document. Using “Markup” allows you to add annotated comments and drawings to your designs, including hands-on drawing instructions, 3D measurements, and dimensional information. You can also create your own digital documentation with notes and annotations directly in your AutoCAD drawing or in a separate drawing file. You can display and share your annotated drawings in your CAD program or by exporting the annotation as a PDF file. Workflow Management with Partitioning and Output: With Partitioning, you can manage the components of your drawing in a logical fashion so that you can easily update your design. You can organize your drawing into a series of logical components and components groups, all of which are available in a single drawing for review and updating. You can also tag and sort the components for easy recall later. You can also create multiple output drafts for each drawing. You can manage your output components and

organize them into separate drawing drafts for each customer, for each iteration of your design, or for any other logical grouping that makes sense to you. You can also specify conditional comments, including a combination of cut-and-paste actions and offset or absolute coordinates, so that you can easily create different outputs. Optimized Data Management: Save time with quicker downloads, faster opening, and more accurate updates. AutoCAD's built-in data management tool, the Data Manager, provides automatic backup and recovery of your drawing data, manages document dependencies, and automatically uploads new or updated data from your local computer to the network. You can also perform bulk updates to your drawing using the Data Manager, which can update any number of drawings in a single step. You can review the data being backed up, with an easy-to-use interface for managing the automatic backup schedule, including start/stop dates and frequency.
