Keyboard Macro Keyboard function for controlling any keyboard (including a QWERTY or a semi-QWERTY) Keyboard control Allows you to create keyboard macros, and then execute them in one or more programs. Description of the program: Keyboard Macro includes a set of macros for controlling the keyboard, and allows you to create macros, which are programs that will be executed at keyboard press. The macros are embedded in the program, so you needn't save the commands to disk. The program allows you to specify the location of the macro in the program that you wish to execute the macro. The function of the macro comes in very handy when using multiple programs on the same PC, and allows you to "copy-and-paste" the same macro to each of them. The next screen shows that the program automatically checks if the included programs are in your PATH. The installed keyboard macros can be found in the Keys-List in the program options screen. The last screen shows the option for "Remove" for each macro. This is the default behavior of the program. As a result, after deleting a macro, it will be removed from the list, but a "Remove" icon will stay in front of the macro name. The picture on the left shows the default behavior of "Remove" operation. The picture on the right shows the button changed to "Delete" operation. IMPORTANT: this program should be supplemented with a "Keyboard Shortcut"-list that provides a keyboard shortcut for each macro. The default "Keyboard Shortcut"-list is provided. For more complete keyboard-shortcut lists, simply download the program, and then use the "Change Shortcut"-button to select one of the other shortcut lists. IMPORTANT: the program will NOT allow macros to be deleted from the program once the short cut list has been changed. SUMMARY: 1. Select and run the program (this automatically puts the macro name into the Program-list) 2. Press the "Control-F" function to select the function that you want to set a macro for 3.
