An action RPG, brought to life by Koei Online. The story begins with the death of Queen Nareise. In order to prevent the imperial clans from becoming divided, a unique kingdom called the Kingdom of Elden was founded. And many generations later, the heroine named Princess Lorraine was born. However, mysterious events occur one by one, and conflicts between the imperial clans and King Auriil, the king that founded the Kingdom of Elden, arise. The struggle between the clans and the world that was born from the same universe has continued until now, when King Auriil passed away. The strong emotions that the princess felt as she watched Auriil's death still remain in her heart. Seeing the king's death, the princess

vanished from the royal palace, and once more embarked on her journey through the Lands Between. With no place to go, she ventured through the snowy mountains of the West, and had an encounter with the North. She then went to the Desert, where she met the South. And then, as she watched the ruins of an enormous city.

Finally, she came across a massive mansion in the center of a dense forest. While she listened to the spirit of a lonely young boy. The princess' course took her there! Q: Web App Development with ASP.NET using Visual Studio 2008 I need to start developing a website (pretty much a simple messaging/blogging engine) for a friend who is a college student and doesn't really have much programming experience. I personally am a fan of websites that are very simple and as such I have been learning ASP.NET.Net for the past 2 years through reading tutorials and watching C# and ASP.NET webcasts (including the Microsoft channel ASP.NET

Unleashed) and the like. I am generally skilled at web programming with VB.NET. Now I have the basics down I plan to port his site from VB.NET to ASP.NET C#. I just wanted to get some opinions regarding the best way to do this: Plop together a "bare bones" app (with very little to no file overwrites) that has all the information he needs on his site. Have him start with a blank project which I will have manually add all the things he needs to the pages. I plan to just start him with the bare bones app and have him work from there. I have always used this method before and I feel it is easier to work this way. What would you recommend? Thanks. A: In the past i have created even smaller projects in Visual Studio for fellow students learning ASP.Net MVC. You should ask them what technology they want to learn and if it is C# then ASP.Net MVC would be the simplest option. Other than that you should create a project for yourself first and focus on the learning (read up, watch videos, do hands on tutorials) Q: How to implement update for multiple records in mysql I have a database design in MySQL that requires updating multiple records simultaneously. The application that will be using this will need to be able to update 300-500 records at a time. This is the table structure that I'm using:
