Note You can have your layers display not only in the Layers dialog box, but also in the thumbnail area of your image files.

When you open a new image, one of the thumbnails will display the current state of your Photoshop document. It's more convenient when you're editing your images in two different places. There are two ways to create a layer in Photoshop: * **Add a new layer** in the Layers dialog box, or at the bottom of an image file's layers. (The step-by-step instructions on adding a new layer later in this chapter explains this process.) * **Use the Layer window.** Once you've opened a new image file, double-click the Layer icon at the bottom of the Layers window to open it (Figure 6-2).

Gastrointestinal stromal tumor of the jejunum with retroperitoneal lymph node metastases diagnosed by double-balloon enteroscopy. A 71-year-old woman visited our hospital complaining of severe constipation and weight loss. Abdominal computed tomography revealed a protruding tumor located in the jejunum and extending into the Meckel's diverticulum. The tumor was diagnosed as a gastrointestinal stromal tumor (GIST), because of its consistency, immunohistochemical results, and lack of metastasis. We also found retroperitoneal lymph node metastases, which were presumed to be mucosal metastases. Double-balloon enteroscopy (DBE) was performed to make a histologic diagnosis. DBE could not only clearly visualize the surrounding organs and the tumor but also precisely characterize the histology of the tumor. We successfully performed a laparoscopic-assisted resection of the tumor, Meckel's diverticulectomy, and retroperitoneal lymph node dissection, including the nodes in the perianastomotic area. The final histologic diagnosis was the same as the preoperative diagnosis. Currently, after 17 months of follow-up, the patient is well without signs of recurrence. We herein reported the first case of GIST of the small intestine with perirectal lymph node metastases diagnosed by DBE.
