Disclaimer - this product is to be used for educational and academic purposes only. This product is designed to show how the derivative of an option can be evaluated using Black and Scholes formula. This can be used for a single option trade or it can be used to create an option strategy using multiple options. Option Trading Workbook offers you a way of calculating the theoretical price and option greeks using the Black and Scholes formula. In this workbook there is a "Strategy Simulation" worksheet which enables the user to enter up to 10 option legs that will be used as a single option combination. This combination will then be graphed to show the expected profit and loss at the expiration date as well as the combined option greeks for the strategy. Option Trading Workbook also includes the following files: 1) Black and Scholes Call Option Formula - The Call Option Formula is based on the Black and Scholes formula that can be used for a single option trade or for creating an option strategy using multiple options. It can be used for both theoretical price and option greeks calculation. 2) Black and Scholes Put Option Formula - The Put Option Formula is based on the Black and Scholes formula that can be used for a single option trade or for creating an option strategy using multiple options. This Excel File includes macros to calculate the Black-Scholes formula for Options Pricing. This formula can be used to calculate the theoretical call, put or implied volatility of a call, put or strangle. This file calculates the call, put or strangle greeks (delta, theta, gamma, vega, rho, theta, psi). When graphing a strategy, this file will plot the theoretical profit and loss and option greeks for each leg in the strategy. You can open this file from Excel and use the formulas to create a strategy in the Excel Strategy Simulator workbook or you can use the provided graphing code to create a graph using any graphing tool such as the Excel Charting tool or R. Option Trading Workbook provides the following functions in the Excel Menu and User Interface: Black and Scholes Option Pricing Go To Black and Scholes Option Pricing Add Option to Strategy Add Leg to Strategy Add Option to Strategy with Code Add Legs to Strategy with Code Assign or Change Allocated Numbers to Strategy or Legs Assign or Change Allocated Numbers to Strategy or Legs with Code This Workbook also includes the following functions: Write Bookmark Write Macros Write Macros to Help with Writing Macros This Workbook includes the following VBA code: Private Sub Worksheet_Change(ByVal Target As Range) Application.EnableEvents = False If Not Intersect(Target, Range("E5, E6")) Is Nothing Then If Target = "C" Then Call DeleteFromPricing Else Call AddToPricing End If End If End Sub Sub DeleteFromPricing() Dim Bookmark As String Bookmark = ActiveSheet.Name & ":" & Range("E5").Value & ":" & Range("E6").Value If ActiveWorkbook.Name = Bookmark Then If Application.WorksheetFunction.CountIf(Range("H7:H75"), "C") > 0 Then 2edc1e01e8
